# Disclosures

- I have no conflict of interest to disclose.

# Neutrophil to Lymphocyte Ratio

Promise as a prognostic factor

Available in routine blood work

Value in patients receiving NAC  
before RC not yet established

# Objectives

---

01

How does NLR relate to tumor response to NAC?

02

Does NLR have value as a prognostic tool in patients receiving NAC prior to RC?

# Hypothesis

A high NLR is associated with a poor response to NAC and is a poor prognostic indicator in patients receiving NAC

# Methods

## PATIENTS:

- Non-metastatic MIBC (cT2-4aN0M0)
- 3+ cycles of cisplatin-based NAC
- 2000-2013 at one of 19 centres across Europe and North America

NLR > 3

NLR ≤ 3

# Results

1865 patients

PATIENTS:

- Non-metastatic MIBC  
(cT2-4aN0M0)

340 patients

NLR > 3

141

NLR ≤ 3

199

# Demographics

NLR  $\leq$  3 patients:

slightly younger  
(61.5 vs 64.5 years old)

&

higher proportion with LVI  
(60.3% vs 48.2% present)

		NLR $\leq$ 3	NLR $>$ 3	Total	P-value

# Limitations

- Retrospective nature
- No comparison cohort that was not treated with NAC
  - Impossible to determine if NLR is predictive of response to NAC

# Conclusion

NLR is a simple and inexpensive risk factor that can be used to assess prognosis in patients with MIBC
