Oligometastatic State

- M1 = incurable…. but….
  - “Cancer comprises a biological spectrum, extending from when a disease is localized to one that is systemic when first detectable but **with many intermediate states**.”
  - “An attractive consequence [of the] oligometastatic state is that some patients should be **amenable to a curative therapeutic strategy**”
- Hot topic

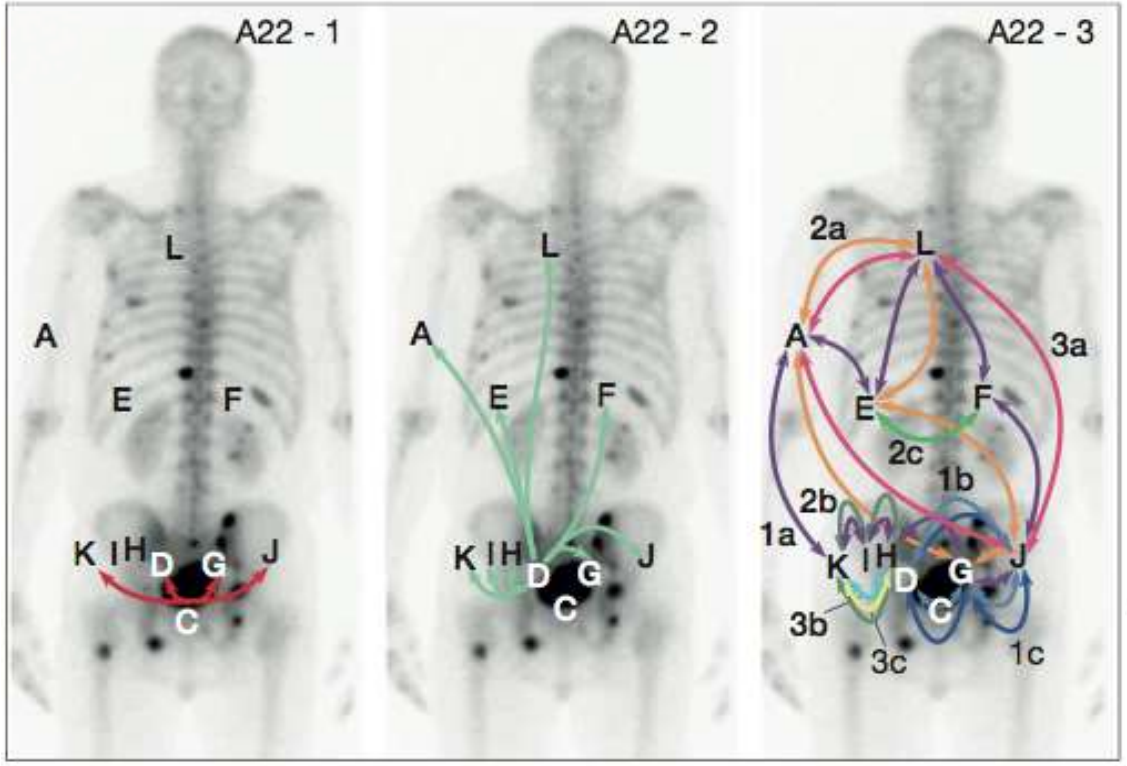
Hellman & Weichselbaum. JCO 1995

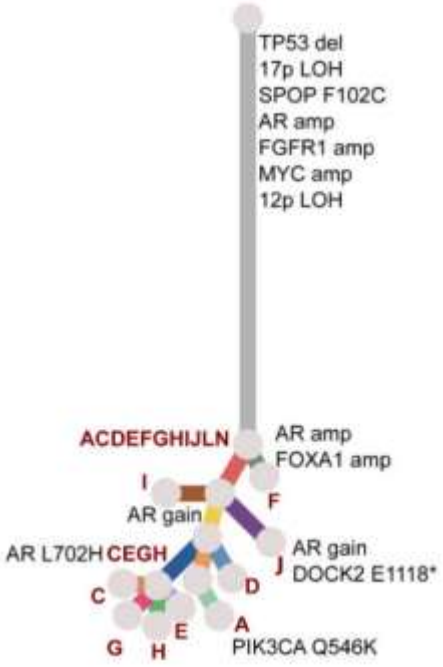
Substantiation of the Paradigm

- Translational research
- Improved imaging methods
- Improved systemic therapies to treat additional microscopic sites (contradictory?)
- Advancements in surgery (e.g. laparoscopic, robotic)
- Advancements in radiotherapy (e.g. SBRT)

But question remains: Fact or Fantasy?

Example in PCa: Biologic Correlate





- Complex (and various) seeding patterns

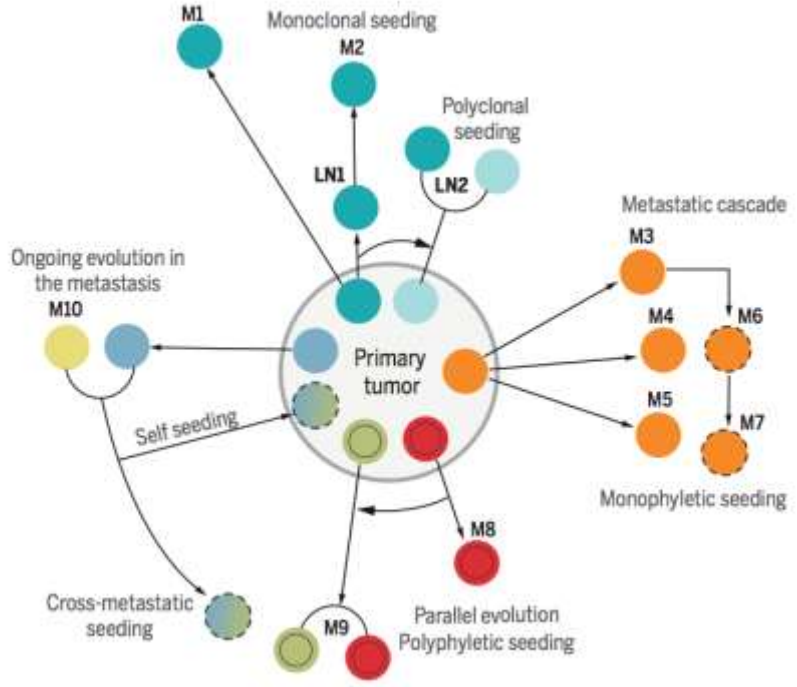
- Mets can evolve capacity to seed subsequent Mets: rapid succession, little intervening evolution

Potential(s): Prevent/Delay CRPC emergence? Cure?

Gundem et al. Nature 2015 ; Shen. Nature 2015

OM State: Clinical arguments (aka evidence)

- Subset of patients with M1 disease do well
- Non-randomized experience(s)
- Randomized evidence
- Refining definitions:
  - synchronous vs metachronous
  - de novo vs OM recurrence vs OM progression
- Recent trials



Models simpler that reality: Complexity imported into the clinics

Turajlic and Swanton. Science 2016

Observational & Obstinate-ional Evidence

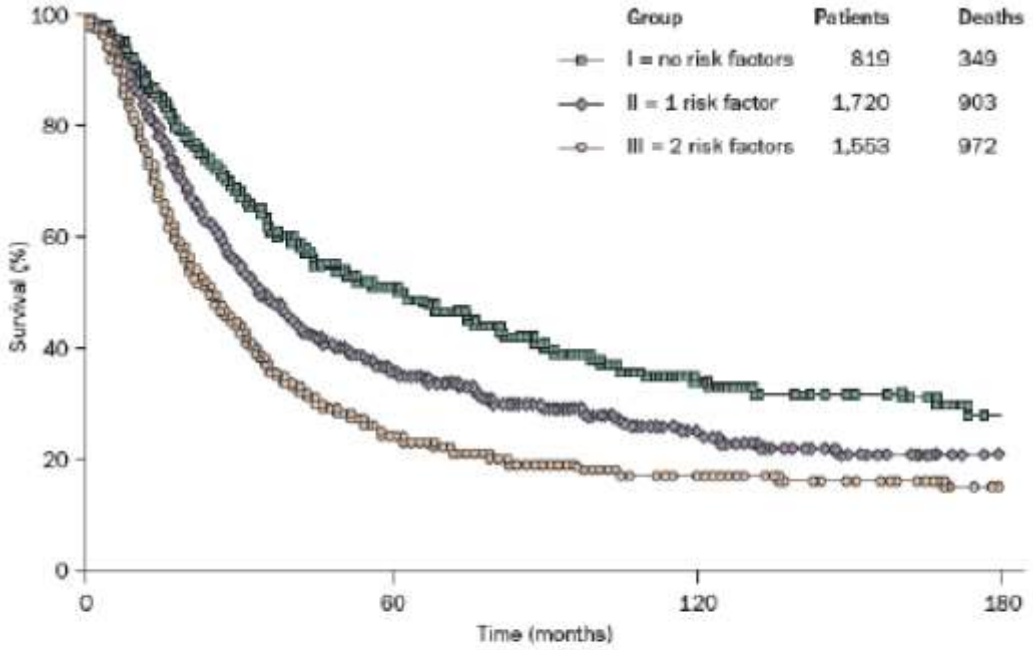


Figure 1 | Survival of patients undergoing pulmonary resection of metastatic tumors. Each curve represents the survival of patients with an increasing number of risk factors for recurrence as determined by a retrospective review of the data.[7] These categories are: group I, a single resectable metastasis with a disease-free interval from primary tumor to metastasis of ≥36 months; group II, multiple metastases or a disease-free interval <36 months; group III, multiple metastases and a disease-free interval <36 months. The size, number and tumor type are risk factors for recurrence. Permission obtained from Elsevier © Pastorino, U. *et al. J. Thorac. Cardiovasc. Surg.* **113**, 37–49 (1997).

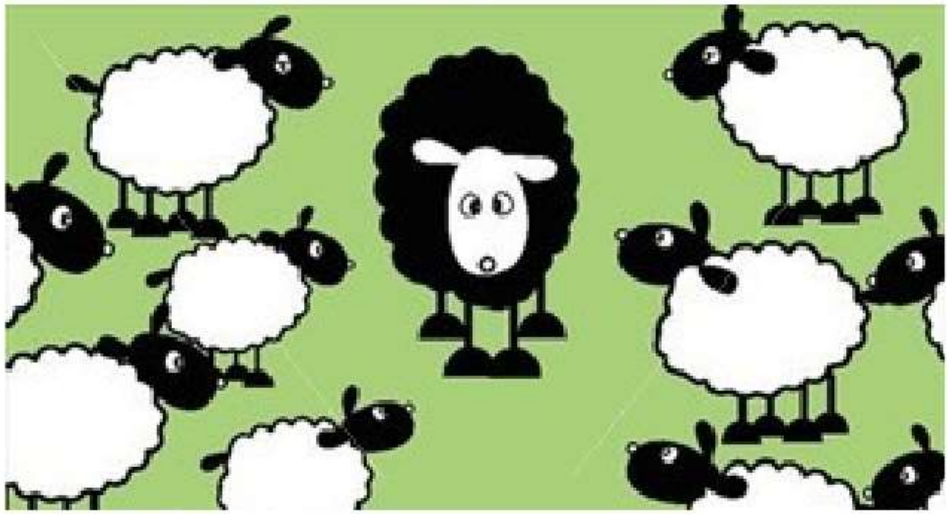
Something going wrong…



Fundamental elements of a crime

- Action or omission
- Defined by the law (“criminality”)
- Unlawful
- *Dolus* (intent or overt negligence)
- Culpability

Something going wrong…

Discussion

This randomised comparison of more than 2000 patients with metastatic prostate cancer showed that local radiotherapy to the prostate did not improve overall survival for unselected patients. However, a prespecified analysis showed that prostate radiotherapy did improve overall survival (from 73% to 81% at 3 years) in those with a low metastatic burden, which represented 40% of the comparison population.

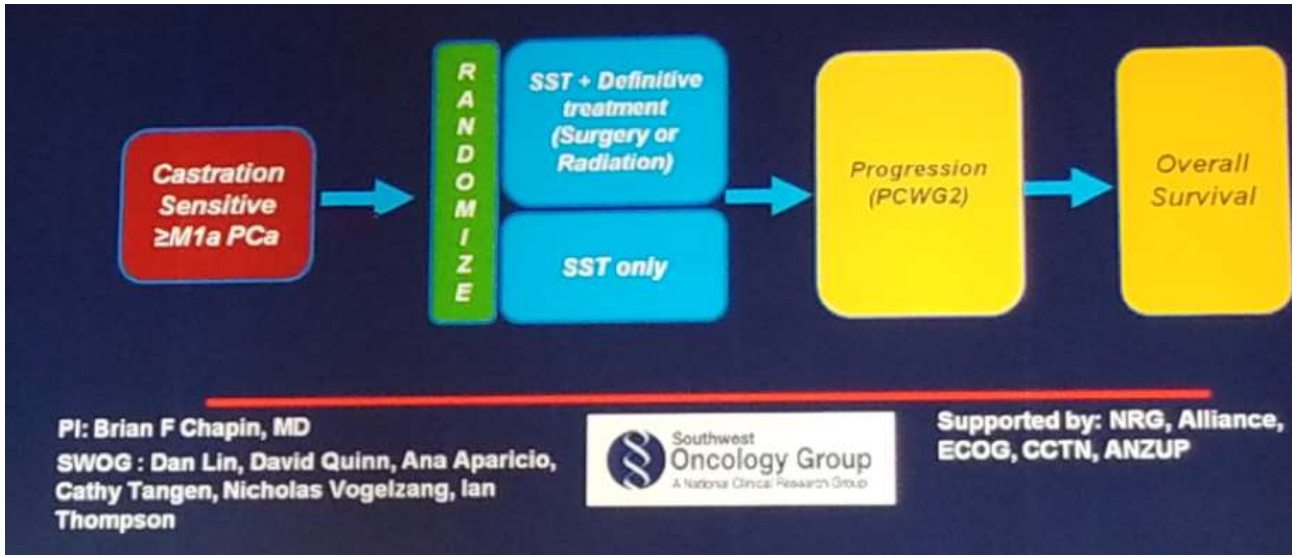
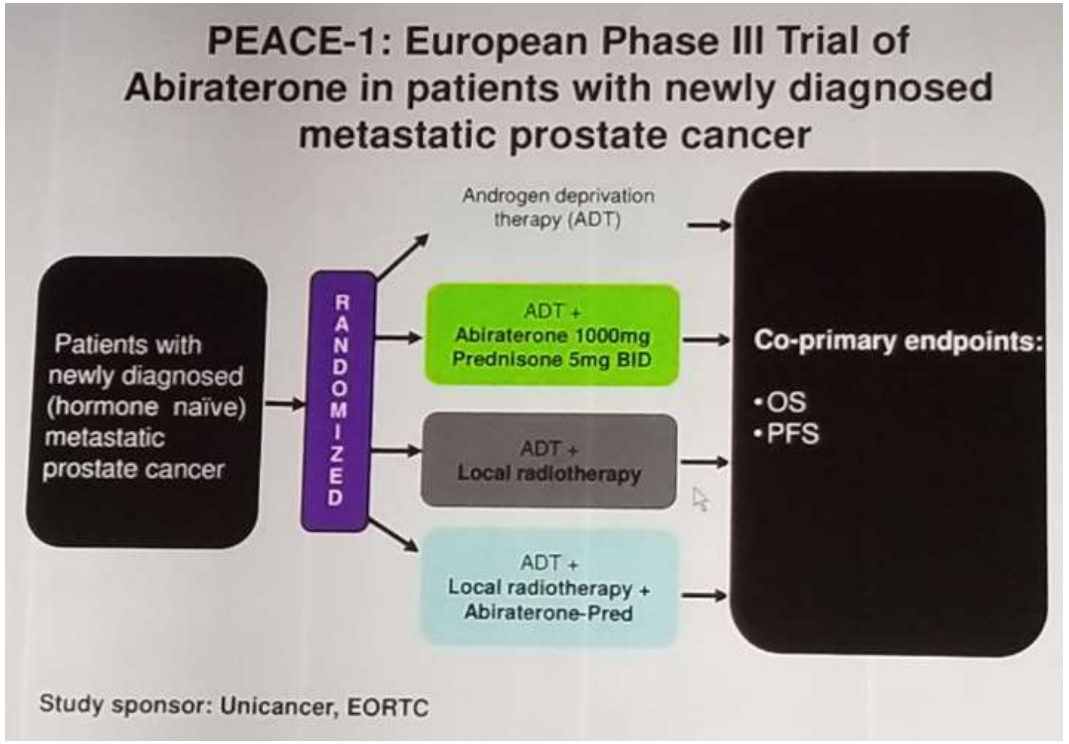
Evidence to treat? to cut?

SWOG S1802 (n=1273)



PEACE-1 (n=1168)



OS yet to come…

Presentation Schema

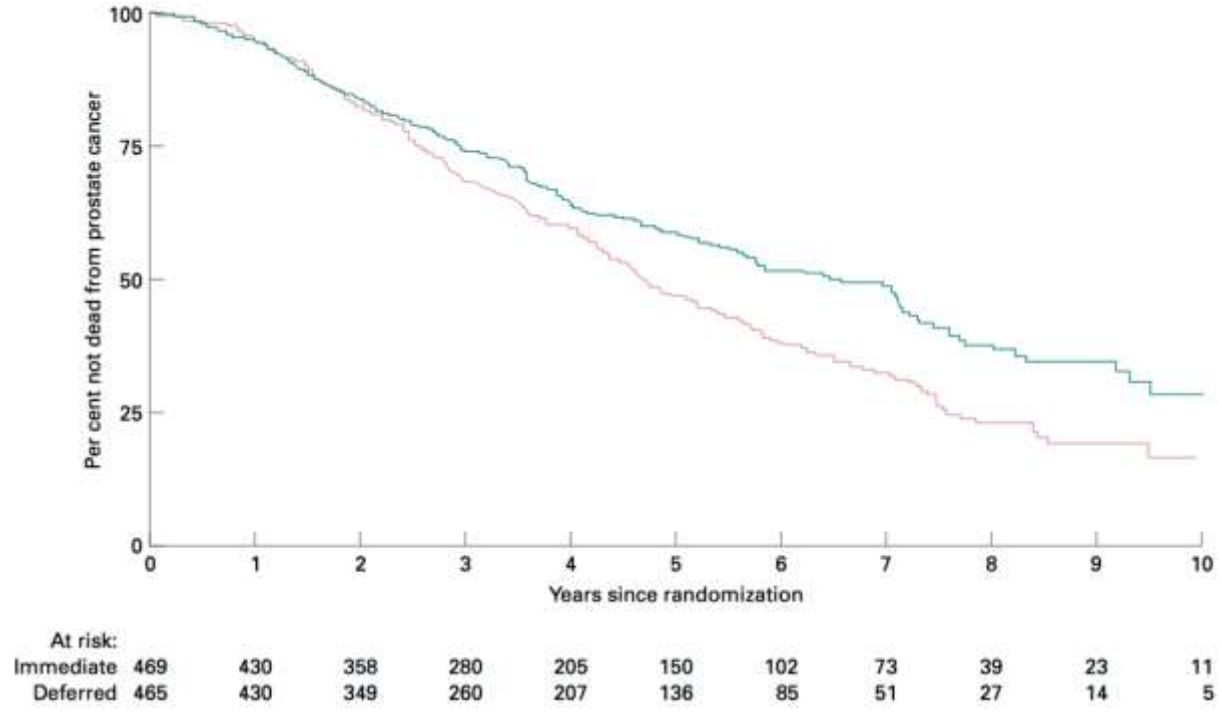
- Oligometastatic (OM) State in Oncology
  - Overarching hypothesis
  - Definitions
  - Evidence of existence and treatment benefit
- OM State in PCa
  - Evidence supporting existence
  - Treatment results
- Personal opinion(s)

Questions remain: Why MDT in PCa?

- Cure (?): alone?, combined with systemic therapy?
- Delay ADT and other systemic agents
- Improve local control (symptomatic progression)
- Decrease metastases seeding sources (PFS?)
- Improved response to AR-targeting agents (?)
- Delay emergence of mCRPC (?)
- Improve OS?

IMO: Oligorecurrent > Oligometastatic

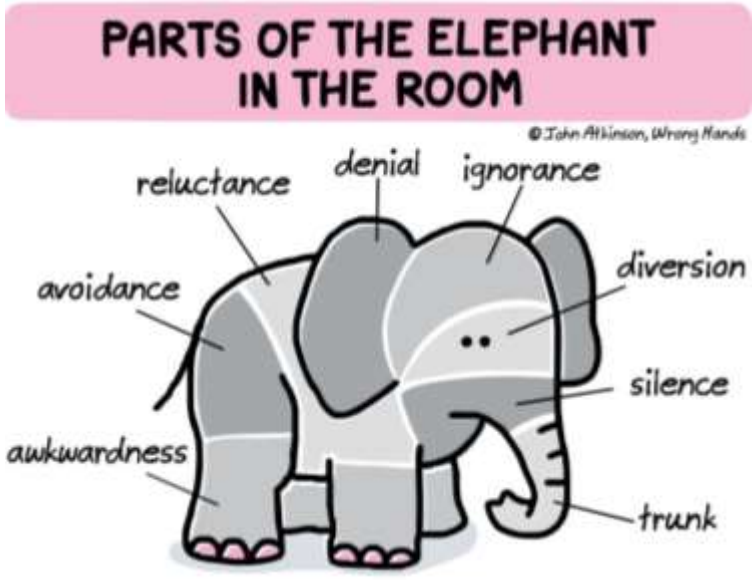
What's Old Is New Again



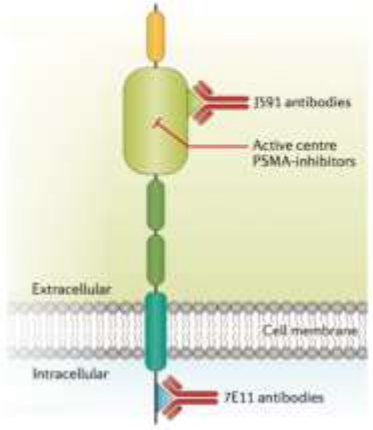
Earlier treatment (when lower disease burden) = Higher response to ADT and PCSS/OS

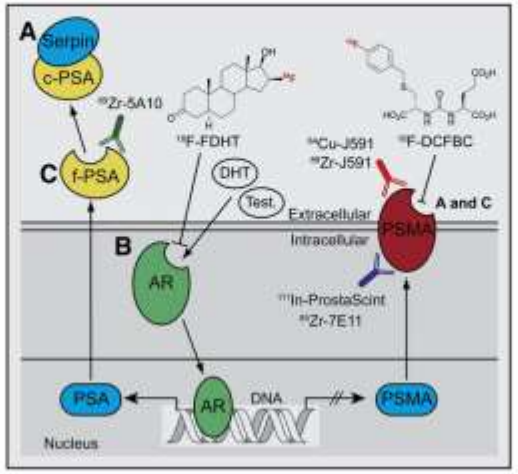
MRC Trial. BJU 1997

Will Rogers: here we go again! #weloveyou



New kid in block: PSMA (Prostate-Specific Membrane Antigen)





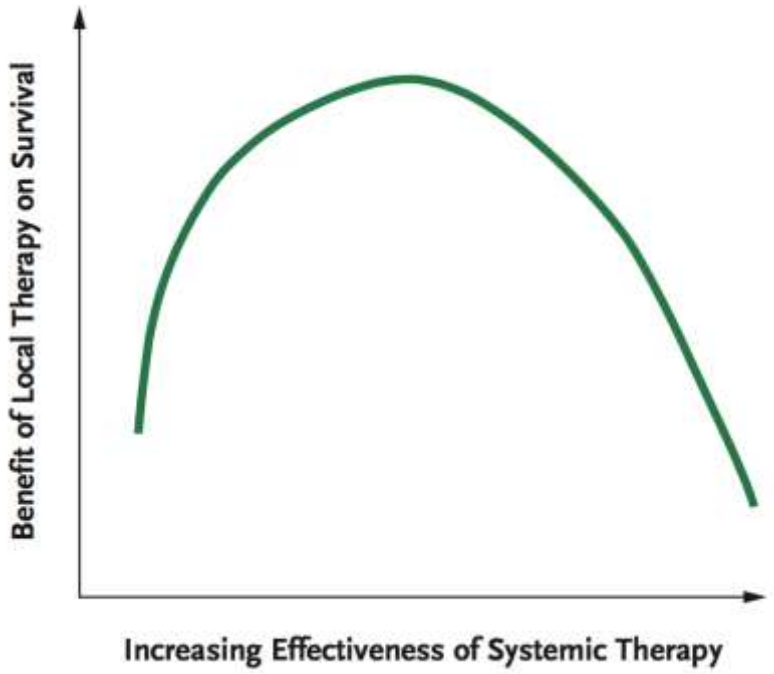
- High ratio (1:100-1000) tumour to non-target expression
- 11p (commonly intact in PCa)
- Internalization upon binding (improved imaging and therapeutic efficacy)

All what we've discussed pertains to the pre-PSMA era

So Far…

- The lower the burden of (*untreated*) disease, the better the response to systemic Tx.

- But:
  - Cure has not been shown
  - OM state remains a **working hypothesis**



Further modulated (at least) by:

- *Burden of disease*
- *Biology*
